***Reasons For Allowance***

The combination as claimed wherein a method and system for generating a testbench for a representation of a device to be incorporated in a data processing apparatus comprising generating a representation of the device formed from constituent blocks and a second set of templates defines the representation of the device and its constituent blocks (claims 1, 25) or the testbench includes a scoreboard for checking data integrity within the model, and the master monitor is operable to output data to the scoreboard indicative of the signals on the bus to which the master engine is coupled (claims 47, 48) or wherein one of the component types is a master type, and for each of said one or more components which is a master type, the predetermined attributes identify connections to any slave components within said one or more components that that master type component is connected to, and wherein the connections are identified as either connections to a local slave component not shared with other master components, or as connections through a bus matrix of the bus interconnect block to a shared slave component shared with one or more other master components (claim 49) is not disclosed, suggested, or made obvious by the prior art of record.

Silicore Corporation (VHDL source code representing the VMEcore entity and testbench) discloses source codes to define components (page 25), test bench for the VmeCorec entity/architecture (page 30), and test vectors for the VmeCoreT test bench (page 41). However, Silicore Corporation does not disclose receiving configuration data

to configure the representation of a device and generating the testbench with reference to the configuration data.

Wrigley et al. (US 2004/0243334) discloses a method of operating a test component arranged in a test environment to issue a test sequence over a bus to a DUT (Abstract, lines 1-4). A configuration file is provided to specify the behavior of the test component and attributes for use in determining the test sequence (Abstract, lines 4-9). However, the test sequence is not generated with reference to the configuration data and a set of templates defining the test environment.
